

APP Alu Hard

Putty with aluminium flakes

APP No. 010460

APP Alu Hard is a two-component filling putty containing a high concentration of metallic aluminum flakes.

It has exceptional anti-corrosion properties and is designed for filling gaps in weld seams and large surface imperfections on galvanized surfaces.

It provides excellent adhesion to: steel, galvanized steel, aluminum, polyester laminates, and old OEM coatings.

APP Alu Hard

Putty with aluminium flakes

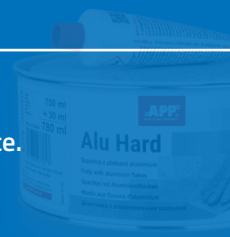

APPLICATION ON SUBSTRATES:

- Steel,
- Galvanized steel sheet,
- Aluminum and its alloys,
- Fiberglass-reinforced polyester products,
- Two-component polyester fillers,
- Polyester laminates,
- Old OEM coatings.

ADVANTAGES

+	Suitable for filling large irregularities.	+	Ideal for filling gaps in weld seams.	+	Excellent anti-corrosion properties.
+	Easy to apply, shape, and machine sand.	+	Can be drilled, threaded, and cut.	+	Enhanced hardness and durability.
+	Short drying time.	+	Resistant to water and moisture.	+	Metallic appearance.
