

APP U300 2in1

Stone chip protection

APP No. 050113, 050114

APP U300 2 in 1 is a sprayable compound based on synthetic rubber, designed to protect car bodies from stone impacts and to seal welded joints, visually recreating a factory-like texture.

It protects car body metal from the effects of salt solutions, as well as low-concentration acids and alkalis. It also has soundproofing properties.

APP U300 2in1

Stone chip protection

APPLICATION:

- Protection of painted car body surfaces from stone chip damage.
- Protection of spoilers, sills, wheel arches, fenders, and undercarriage from damage caused by stone fragments, sand, and salt.
- Spray sealing of welded joints.
- Recreating a factory-like spray seal texture.
- As a soundproofing compound for wheel arches and undercarriages of buses and passenger cars.

ADVANTAGES

+	Ready to use after mixing.	+	Dries with a classic textured „orange peel” finish.	+	Can be used as a UBS coating or as a sprayable sealant.
+	The surface texture remains almost unchanged during drying (does not spread out).	+	Excellent adhesion to various substrates.	+	The protective coating can be painted over with any type of topcoat.
+	Salt spray resistance test according to DIN50021 standard: 720 hours for the painted product.
