

2POLISH.

Open-cell polishing sponge

The sponge is made of open-cell foam, which, thanks to its specific design, increases the polishing power, while stabilising the temperature during use. The safe height of the sponge (h=25 mm) and the bevelled side profile allow for greater safety when working in hard-to-reach areas. The open-cell design prevents the sponge from becoming too hot, extends its durability and ensures that the polishing paste does not clog it. APP for AD 2Polish is designed for both rotary motion machines and Dual Action polishing machines. Hook-and-loop fastening facilitates changes while working on the paintwork.

APP for AD 2Polish is ideal for all lacquer coatings of medium hardness. We recommend using the sponge in combination with the dedicated APP for AD Cut paste (for hard or heavily damaged lacquers) or APP for AD Polish (for soft or less damaged lacquer coats).

ADVANTAGES:

■ OPEN CELL STRUCTURE

■ EXTENDED DURABILITY

■ SEVERELY LIMITED HEATING

■ BEVELED SIDE PROFILE - FACILITATES ACCESS TO HARD TO REACH PLACES

■ OPTIMUM HEIGHT - ALLOWS COMFORTABLE DRIVING OF THE MACHINE

APP Nr	Product name	Type	Size	Quantity
080133	APP for AD 2Polish - Open-cell polishing sponge, Velcro, blue	universal	d38/45 h15	6 pcs.
080134	APP for AD 2Polish - Open-cell polishing sponge, Velcro, blue	universal	d50/60 h20	6 pcs.
080135	APP for AD 2Polish - Open-cell polishing sponge, Velcro, blue	universal	d75/90 h25	2 pcs.
080136	APP for AD 2Polish - Open-cell polishing sponge, Velcro, blue	universal	d125/140 h25	2 pcs.
080137	APP for AD 2Polish - Open-cell polishing sponge, Velcro, blue	universal	d150/165 h25	2 pcs.
