Product name: Finish polishing paste with protection APP for AD Finish + Protect. APP No.: 081255.

A finishing polishing emulsion, consisting of synthetic abrasive grains, waxes and impregnating agents made from reactive surfactants. It effectively removes holograms, film and fine scratches thanks to the rotary-eccentric method of application. Through the use of carefully matched impregnating agents and waxes, the paste imparts a high gloss to the surface, seals it and preserves it. It is designed for both machine and manual application. The best results are achieved when used with soft APP polishing sponges.

Packaging APP No. 081255 – 1000 ml.

Product and accessories APP for AD Finish + Protect.

Main ingredients A mixture of synthetic ultra-fine nano abrasive grains, hydrocarbons and waxes dissolved in water.
Please note!
Does not contain volatile silicones (PDMS), PFAS or microplastics.

Colour Purple.

Density at 20°C 1.01 g/ml.

pH 8.0–8.5.

Application Polishing paste designed for:

- machine polishing with eccentric (dual-action) and rotary polishers, as well as manual polishing,
- the final stage of paintwork surface correction,
- removing residues such as micro-scratches, holograms, etc., left by polishing compounds used in earlier stages of polishing,
- achieving high clarity and gloss on the cured topcoat,
- protecting and maintaining paintwork coatings by providing a high-quality seal on the paint surface with an intense water-repellent effect.

Application

For use on:

- polished surfaces as a finishing and maintenance stage,
- rotary and eccentric polishers,
- factory-applied paintwork,
- HS and UHS restoration paints as a finishing stage during paint repairs,
- old, oxidised paint coatings during their rapid restoration.

Warning!

Use only on cured substrates.

Process

Before buffing, remove any residue from previous polishing stages using a microfibre cloth, e.g.

APP MF Cloth (APP No. 080661)

Machine application.

Apply a small amount of paste to a soft APP polishing sponge and spread it evenly over the paintwork at low speed to avoid splashing. Once spread, you can begin to increase the speed and polish in a criss-cross pattern so that the polished areas overlap. During the process, the abrasive particles break down completely and their abrasive action diminishes, enhancing the gloss effect. Once a very high gloss has been achieved, stop work and inspect the surface to determine whether further treatment with a fresh application of polish is required. After completing machine polishing, finish by hand using a microfibre cloth, e.g. APP QUARTZ Q806 (APP No. 080646). Rotational speed for a rotary polisher: 1500–2200 rpm.

Manual application.

Using the APP MF Cloth (APP No. 080661), apply a small amount of polish in circular motions to a clean and degreased paint surface, then spread it thoroughly. Wait until the applied layer of polish has dried, then buff the surface by hand with a microfibre cloth, e.g. APP QUARTZ Q806 (APP No. 080646).
