

B 200/220 Autobit

APP No. 050611, 050811, 050812

Bituminous coat purposed for:

- maintenance related works,
- car body anti-corrosion protection,
- protection against stone related chippings.

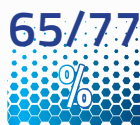

Thanks to special properties, thick coats of product may be applied without compromising product elasticity. It provides permanent anti-corrosion protection for car and vehicle chassis, machinery and other devices exposed to weather conditions.

Short drying time

Short maintenance period = higher vehicle availability.

Solid content:

1 L-**65%**, 1,3 L; 2,5 KG-**77%**,

Possible thick coat application without risk of coat running.

Norma DIN50021:

1 L-**1000 h/400 µm**, 1,3 L; 2,5 KG-**480 h/375 µm**,

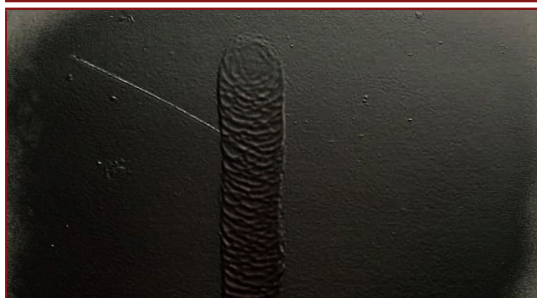

Contains additives that improve anti-corrosion protection.

B 200/220 Autobit

Comparative analysis of anti-corrosion protection product:

	B100 / B120	B200 / B220
Packaging:	500 ml spray, 1 L spray, 1.3 kg and 2.5 kg application with brush.	1 L spray, 1.3 kg and 2.5 kg application with brush.
Application, flow and levelling properties:	Easy application, very good flow and levelling properties.	Stable during application, possible thick coat application without risk of coat running. Brush product mass density higher than B120.
Structure:	Smooth texture.	Dashed plaster texture. Other texture available.
Anti-corrosion protection:	Contains anti-corrosion additives.	Contains anti-corrosion additives, Anti-corrosion protection improved comparing to B100 / B120.
Coat anti-corrosion protection test inside salt chamber pursuant to DIN 50021 Standard:	1 L – 700 h. 1.3 kg and 2.5 kg - 200 h.	1L - 1000 godz. 1,3 kg and 2,5kg - 480 godz.
Average coverage at coat: 600 micron for 1L product	1,4 m ²	1,5 m ²
Solid content:	55%	65%

ADVANTAGES

+	Application with a brush or by spraying.	+	Stable and elastic in case of thick coat application.	+	Short drying time.
+	Very good anti-corrosion protection. (contains additives that improve anti-corrosion protection).	+	Improved coverage thanks to high content of solids.
