

• APP PDS100

Filler mixing board - vertical, 100 sheets

The new APP PDS100 board consists of 100 disposable chalk sheets 90 g/m², to ensure thorough mixing of hardener and polyester filling. The chalk paper sufficiently protects the surface of the sheet from water absorption.

The paper pack is three-sided glued to ensure a solid mounting of the sheets on a rigid board. The filler mixing board is an essential tool when working in a painting workshop.

A simple well-thought-out form and functional parameters of the paper provide an efficient and quick solution for filler mixing before applying it on a repaired part of the body.

ADVANTAGES:

- stable base,
- silk-matt chalk overlay paper, three-sided glued
- large working surface: 215 x 245 mm,
- 100 disposable chalk overlay sheets,

APPLICATION:

The board will work well for mixing any fillers available on the market, both universal and specialists.

A hole for a stable grip of the board.
