

• APP Mixing Cup Pro Starter pack for spray gun

The starter pack for spray guns such as APP FX1, DeVilbiss, SATA and Iwata is a set of products included in the APP SP-LAK System for preparing of varnish. Thanks to this proposal, the customer has the opportunity to try out the products needed to prepare the varnish mixture without using a standard container for spray guns. APP SP-LAK System for varnish preparation is an innovative solution for any paint shop. This system maximizes the efficiency of working time during varnishing process. It is characterized by achieving better results while reducing costs at the same time.

Advantages of the SP-LAK System for preparation of varnish:

- One cup for mixing and for a gravity spray gun
- Reduce of the amount of solvent used for clearing of tools
- Quick and easy installation
- System connection that fit for many types of guns
- Easy storage of ready paint
- Lightweight and easy to use
- Integrated venting system
- No disposable paint strainers needed
- Solid attachment to spray gun
