

• **NTools V125**
Suction cup for dent repair with pump 125 mm

NTools V125 is a specialized tool used during paint-less vehicle bodywork repair. The suction cup features a $\phi 125$ mm rubber mount which enables repair of large dents. The pump located in the upper part of the handle is responsible for stably fixing the tool to the surface being repaired.

The special construction of the handle makes it possible to control the pulling out of a dented bodywork fragment. The suction cup is made out of a high quality plastic material and rubber. A fitted cover secures the rubber element against dirt. NTools V125 is a tool dedicated for work with non-rigid bodywork elements, such as doors, roof, engine cover, the side panels of delivery vehicles, etc.

REMEMBER!

Before commencing with repairs make sure that the damaged spot is free of any dirt. If not, use the W900 cleaner which will clean and additionally de-grease the bodywork fragment which you are about to repair.

Advantages:

- fast and effective repair of bodywork dents without damaging the paint
- pump which enables stable fixing of the suction cup to the surface
- the 125mm suction cup diameter enables repair of very large dents
- rubberized handle with an additional grip
- high quality flexible rubber
- low weight: 420g
- cover securing the suction cup
