

• **NTools M-VDP Set**
4 in 1 suction cup based dent removal set with pump

NTools M-VDP Set is a professional set for paint-less removal of large, medium and small dents which occur on vehicle bodyworks. The set consists of three specialized suction cup handles with diameters of $\varnothing 75$, 100 and 125 mm and an adapter for repairs using a spotter.

The suction cups are made out of very flexible rubber, which enables them to be fitted to nearly any surface. The mounting thread features a seal ensuring tightness of the vacuum system. The upper part of the device features a pump used to create a vacuum. This enables correct and stable mounting of the suction cups to the repaired surface, while the pressure valve is used to release them. The ballast weight (1,22 kg) enables smooth horizontal back and forth motion which requires little effort from the operator. The **NTools M-VDP Set** is a noninvasive and effective method of repairing bodywork elements, such as: doors, roof, engine cover, side panels, fenders, as well as lacquered bumpers made out of plastic materials.

REMEMBER!

Before commencing with repairs make sure that the damaged spot is free of any dirt. If not, use the W900 cleaner which will clean and additionally de-grease the bodywork fragment which you are about to repair.

Technical data:

- 3 x suction cups with diameters of: \varnothing 75 mm, 100 mm, 125 mm
- 1 x adapter for repairs using a spotter
- total device length without a suction cup: 730 mm
- weight of the ballast individually: 1,22 kg
- weight of the impact puller (with suction cup): 2,80 kg
- weight (of the entire set in a case): 4,50 kg
- suction cup thread and adapter: M18
- case dimensions: 750 x 170 x 100 mm (L x W x H)

Advantages:

- fast and effective repair of bodywork dents without damaging the paint
- high tightness of the vacuum system
- dent removal from plastic bumpers
- removal of large, medium and small dents from vehicle bodyworks
- requires little operator effort
- set mobility and solid case
- does not require the use of additional tools
